Market

The PSV segment is still characterized of low rates on both short- and long term contracts in spite of many vessels being stacked. Currently, it seems to be some time ahead before the market balances, and it seems necessary with a significant scrapping of vessels to restore market balance.

We do not see any significant activity increase in marine seismic, and uphold our weak market view in this segment.

In the subsea segment we see an increasing rate fixing level for vessels globally. We expect more activity within contract awards for field development and pipe lay which will be positive for the subsea segment in the long term. In the short term we expect a demanding market going forward, and do not see any imminent balance between supply and demand globally.

Thanks for Your attention!
